

FIREPROOF

FAST/RIT Rescue Blanket – Stretcher

The HOT•STOP® FAST/RIT Rescue Blanket ~ Stretcher is a multi purpose rescue tool designed to offer superior protection for downed firefighters and civilian victims...

The HOT•STOP Rescue Blanket - Stretcher is deployed foil side up to protect a victim during assessment, bottle changeover and extrication. Once the victim is freed the blanket acts as a flexible stretcher allowing rescue crews to maneuver in ways a traditional backboard or basket could not.

Each blanket has four strap handles and eight tote handles which allows it to be easily carried by up to eight members. When stowed, the blanket measures 7" x 29" and weighs only 19 pounds, it will easily fit in any truck compartment. Its small size and lightweight allow it to be taken into tight areas a rigid stretcher wouldn't fit. With the optional carrying harness the blanket allows for hands free to carry other tools.

With FAST/RIT teams performing one of the most strenuous tasks on the fireground the HOT•STOP FAST/RIT Rescue Blanket-Stretcher is a tool that helps protect and efficiently execute a timely victim removal, work smarter not harder. Once the victim has been secured in the protective blanket his/her time to treatment will be greatly reduced compared to traditional lifts, carries and S.C.B.A. drags. Speak to your local distributor to schedule a demonstration, one drill with the blanket and you will see the future of firefighter rescue tools.

PERFORMANCE FEATURES

SIZE DEPLOYED: 56" X 8' • SIZE STORED: 7" DIAMETER X 29" • WEIGHT: 19 LBS.

- OUTER SHELL ALUMINUM LAMINATED GLASTEMP® - 1000°F MELTING POINT
- INNER LINING HOT•STOP® 1500"H"- 2080°F MELTING POINT
- HANDLES WOVEN ARAMID FOR HIGH STRENGTH AND ABRASION RESISTANCE
- TWO PLACE CROSS REINFORCEMENT WOVEN ARAMID SEWN TO INNER LINING PROTECTING ALL STITCHING
- CORNERS AND HANDLES REINFORCED WITH NICKEL-PLATED STEEL RIVETS FOR ADDED DURABILITY
- VELCRO AND WEBBING ATTACHED IN TWO PLACES TO SECURE A VICTIM DURING TRANSPORT
- STRAP HANDLES SEWN INTO LONG HEMS FOR ADDED STRENGTH
- BLANKET CAN BE REPAIRED AS REQUIRED
